Professional Summary

Data Science graduate from James Cook University, Singapore Campus, with hands-on experience in data analysis, machine learning, data visualization, and Streamlit dashboard development. Currently building a 23-project real-world data science portfolio focused on solving practical problems through Python, analytics, and machine learning. Passionate about transforming raw data into meaningful insights, interactive dashboards, and decision-support tools.

Education

Bachelor of Data Science | James Cook University, Singapore Campus |
Graduated 2025 | GPA 5.25 out of 7

Technical Skills

- Programming & Data Analysis: Python, SQL, Pandas, NumPy
- Machine Learning: Scikit-learn, Machine Learning Models, Neural Networks
- Data Visualization: Matplotlib, Data Visualization, Dashboard Design
- Tools & Platforms: Streamlit, GitHub, Jupyter Notebook, VS Code
- Core Strengths: Data Cleaning, Exploratory Data Analysis, Predictive Modeling, Model Evaluation, Project Documentation

Working Experience

Gold Shop & Pawn Management Software — Developer / Project Builder

Developing software for a Myanmar-based gold shop and pawn business to support business operations, customer records, pawn transactions, and data management.

Technical Projects

23 Projects at 23 — Real-World Data Science Project Series

Building a personal data science portfolio consisting of real-world projects across analytics, machine learning, dashboard development, optimization, and decision-support systems.

Project 13 of 23: Smart Waste to Energy Analytics Platform : Developed an analytics platform to evaluate waste composition, estimate CO₂ emission reduction potential, and support waste-to-energy decision-making. Combined machine learning, environmental analytics, and dashboard development to create a practical decision-support system.

Project 14 of 23: Emergency Ambulance Reinforcement Learning System : Built an emergency ambulance optimization system using data science and reinforcement learning concepts to support faster and smarter ambulance allocation. Developed an interactive Streamlit dashboard to visualize emergency demand, ambulance locations, optimized routes, and system performance.
